About Me

Associate Data Engineer with experience in Data Governance, Master Data Management (MDM), and enterprise data engineering in the banking sector. Strong foundation in Machine Learning, AI, SQL, and Python, with experience developing data-driven solutions and deploying end-to-end machine learning applications.

Skills

Databases: Microsoft SQL Server, PostgreSQL, Oracle Database, MongoDB

Languages: Python, SQL, Java, C++

Data Engineering: ETL, Data Modeling, Data Governance, Master Data Management (MDM), Data Quality

AI & Machine Learning: Machine Learning, Deep Learning, Computer Vision, NLP

Libraries & Frameworks: Pandas, NumPy, Scikit-learn, TensorFlow, Spark, Hadoop, Flask, Streamlit

Tools & Platforms: SSMS, Oracle SQL Developer, PL/SQL Developer, Git, VS Code, Jupyter Notebook, Google Colab

Work Experience

CB Bank PCL | Associate Data Engineer

May 2026 - Present

- Designed and implemented **Master Data Management (MDM)** solutions for enterprise master and reference data.
- Developed and maintained SQL Server database objects, including tables, constraints, indexes, and stored procedures.
- Designed normalized relational data models to ensure data integrity, consistency, and scalability.
- Applied **enterprise data governance principles** by defining data standards, business rules, metadata, and data quality controls.
- Built ETL processes for data ingestion, transformation, validation, and loading into enterprise data repositories.
- Collaborated with business stakeholders and data stewards to establish governance policies and improve data quality across business domains.
- Produced technical documentation, data mapping specifications, and data dictionaries to support governed data assets.

Myanmar Apex Bank | Intern

July 2025 - Sep 2025

- Extracted, cleaned, and transformed **2M+ financial transaction records** from Oracle databases using advanced SQL.
- Improved reporting performance by optimizing SQL logic, reducing query execution times by **30%**.
- Collaborated with technical teams to design data logic and automate data validation workflows.
- Developed **dashboards** to track key banking metrics and improve real-time financial performance visibility.
- Supported cross-departmental reporting by improving data accuracy and reducing manual processing.

Education

University of Wollongong, Australia — Bachelor of Computer Science, Big Data

Mar 2023 - Mar 2025

- Weighted Average Mark (**WAM**): 73.94 / 100
- Specialized in Big Data, data mining, machine learning, scalable systems, and distributed architectures.
- Completed capstone projects involving ML model development, map-based visualization, and data analytics.

Singapore Institute of Management — Diploma In Information Technology

Apr 2022 - Mar 2023

- Studied programming (Python, Java), computer networking, DBMS, and IT project management.

Project

ASL Recognition

Aug 2025 - Aug 2025

Personal Project

- Built a real-time **American Sign Language (ASL) recognition system** using TensorFlow/Keras, OpenCV, and MediaPipe.
- Achieved **~99% accuracy** on training and validation through CNN-based modeling and preprocessing pipelines.
- Designed a live prediction interface using OpenCV for real-time gesture recognition via webcam.
- Source Code: [GitHub Repo](#) | [Kaggle Notebook](#)

Traffic Bottleneck Identification on Road Network

Oct 2024 - Feb 2025

Final Year Project

- Led a **team of 4** to design and implement a dynamic traffic bottleneck detection and routing system.
- Built a routing engine using **Python, NetworkX, and graph algorithms** to detect congestion and compute alternate paths.
- Integrated **map-based visualizations and synthetic/real-time traffic data** to identify high-impact bottlenecks.
- Delivered geospatial analytics dashboards supporting route optimization and delay reduction strategies.
- Live Demo: [FlowX App](#)

Language

- English (Fluent)
- Burmese(Native)
